# How to Install GrutBrushes TPL Brushes

➤ Method A Drag and Drop

1. Extract/Unzip the .zip file (important! Don't try to drag to install without extracting)

2. Select all the GrutBrushes TPL files (**only** the TPL files) that you want to install and drag them onto the Tool Presets Panel or the Photoshop Icon.

3. They will appear in the Tool Presets panel (*Window > Tool Presets*) Not in the Brush panel.

### That's it, Start Painting!

Don't See your GrutBrushes?

- You will not find them in the brushes panel! They are tool presets (tpl files) not abr files
- Make sure that '*Current Tool Only*' is un-checked at the bottom left of the Tool Presets panel.

➤ Method B - Using the Free GrutBrushes Plugin Panel

(*Photoshop CC 2014/15/17 **only***) Available at http://grutbrushes.com/plugin

1. Click on the '**ADD**' button to add brushes from your hard drive
2. Select the GrutBrushes you want on your hard drive. They will then appear in the GrutBrushes panel.

That's it, Start Painting!
